

POLICY OF QUALITY

We are meaningful producer of plastic and combined protectors of tubular products with smooth and threaded end, transport frames for pipes carriage and other equipment of tubular products, which we supply to our customers in the Czech Republic, Europe and in other lands of the world. Facility leading is aware to themselves of growing requests of customers for products supply in requested quality, agreed time, amount and for competitive prices. Order to comply these requests we have management quality system and by our management is this policy of quality promoted through these areas:

A. The partnership

Customers, processors of material and suppliers are considered partners participating on quality of our products. Essence of cooperation is the orientation to actual and future requests of customers and processors of our material. There is considerable accent deemed to extending cooperation with these partners in the protectors and transport frames area.

B. The technology

Development of production base and technological procedure are aimed to raise quality of products, new products and production technologies loading so, order to:

- ☐ were fulfilled present and future requests estimated by customers of supplies quality,
- ☐ were used raw materials effectively and consumption of materials and energy mitigated,
- ☐ were restricted amount of arising waste and part of its use was raised,
- ☐ preventive mitigate general negative stroke of production to health and lives of people, environment and property.

C. People

Security and protection of health of employees is organic part of all activities of organisation and it has the highest priority. The keeping of law's establishments in area of security and protection of health in the area human rights and rising of intellectual capital are basic access to management of human resources, what leads to rising of:

- ☐ qualification, knowledges and abilities of staff on all executive and control places,
- ☐ awareness of responsibility for a quality of products and semiproducts,
- ☐ awareness of responsibility for their health and fellow employees,

System of prepare of staff is developed order to cover needs of all present and next projects of progress. It is aimed mainly to professional education and progress in QMS and Security and protection of health.

D. Management

There are empowered principles of process access with aim to prevention in the production activities for management system development including of quality management, environment of life and protection of health by work.

Facility management commits:

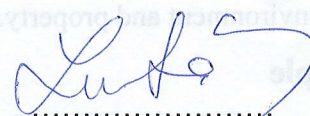

- ☐ to ensure humans, materials and financial resources and guarantees their efficient usage,
- ☐ to make decisions only in according with law and legal prescriptions and standards in the area of quality, environment and safekeeping by work,
- ☐ to ensure, that work activity will be processed by safety of processes,
- ☐ to lead and motivate employees to safe work.

Management of facility leads employees to keeping of work and technologic processes with active access for improvement of work, what leads to filling of aims and mitigation of fees on all workplaces. Employees duty is to keep safety and raise their knowledge in that area.

This Policy of Quality, environment and safety of health by work is elaborated into aims of quality, environment and safety of health by work in PATREM PIPE TECHNOLOGIES facility.
